

Attention Galena Residents!

Upcoming Brightspeed Fiber Installation

Beginning on approximately April 1, 2026 the Brightspeed team will begin installing their fiber network in the Village of Galena. Much of their infrastructure will be run via aerial lines that run through the old Village. The Heathermere and Communities at Galena subdivisions will be run via directional boring. With that in mind, the Brightspeed team has agreed to the following conditions:

- Only 1-2 crews will be actively working at a time
- Crews must confine digs to areas that can successfully be bored that same day
- No holes may be left overnight without authorization from the Village, and those holes MUST be barricaded / covered to prevent any injury risks
- Equipment may not be left on the roads or on residents' properties overnight
- Work crews may not work on Sundays without prior authorization from the Village

NOTE: The door hanger pictured to the right will be distributed to residents impacted by construction – this is NOT marketing, please don't throw it away – scan the QR Code to get more information.
